

EasyAssetTracker

powered by LinkLabs

Asset tracking beyond GPS. Know where it is, prove where it's been.

Critical election equipment shouldn't go dark the moment it leaves the warehouse.

EasyAssetTracker, powered by Link Labs, is purpose-built for election offices, giving teams complete visibility into the location, movement, and status of every asset. By combining real-time GPS tracking, deployment workflows, security monitoring, and comprehensive audit reporting, it simplifies election logistics while improving accountability from warehouse to polling place and back.

The only election-specific solution that goes “beyond GPS” and allows for indoor and outdoor asset tracking. EasyAssetTracker helps election offices protect voting equipment, ballot retrieval bags, tabulators, and other critical assets with continuous visibility throughout the election process.

Capabilities built for the job:

Geofencing

Define approved polling locations and routes for equipment and delivery vehicles. Any deviation triggers an immediate alert, reducing the risk of tampering or lost assets.

Unauthorized Alerts

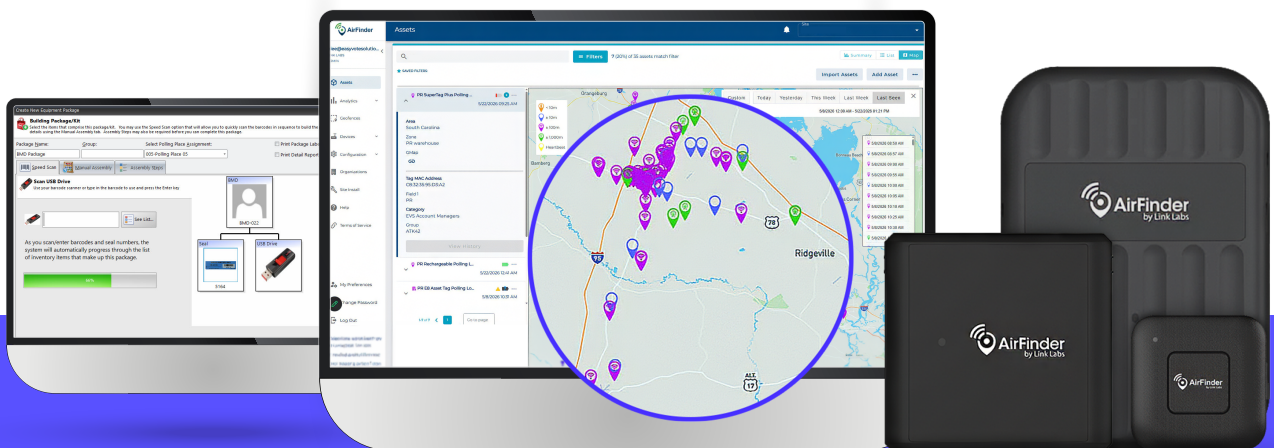

Receive instant alerts for unauthorized movement or delays, keeping election staff informed at every step.

Chain of Custody

Document a full chain of custody for audits & compliance, ensuring accountability for every handling event.

Transparency & Trust

Enhance transparency & build public trust through verifiable, auditable records of all equipment movement.

Easy**AssetTracker**: Election Use Cases & Capabilities

The Where

Track *where* your assets are

- Indoors & outdoors at any time
- Receive different notification styles depending on the tracked asset
- Each device has a unique ID
- All assets in one consolidated dashboard

The How

Track *how* your assets are doing

- Temperature/Humidity
- Shock
- Tampered
- Open/Closed
- + any BLE sensor

The What

Track *what* your assets are doing

- Crossing outdoor/indoor boundaries
- Dwell times
- Transit times
- Separated from a group
- Route history

Election Equipment Tracking

The AirFinder solution ensures real-time tracking of election equipment and supplies, enhancing operational efficiency and security during elections.

Ballot Box Monitoring & Security

AirFinder enhances ballot box security with open/close door sensors, movement detection, temperature monitoring, and shock detection. Real-time alerts provide immediate visibility into potential security events, helping protect live ballots.

Secure Custody of Cast Vote Records Media (VDrives, cards, other)

By using AirFinder, you maintain continuous chain of custody for your CVR media from the elections office to the polls and back again.

Monitoring Live Ballots

AirFinder lets you show exactly where every ballot was, when, and in whose custody—building public trust and turning speculation into documented fact.

The Result: total visibility over every critical asset, indoors and out – so your office can protect the chain of custody, pass every audit, and give the public real confidence in how elections are run.
